

Subscription Estimate Calculator

Applies to: HYPEMedical Billing Agent clients (7+ doctors)

Purpose: Estimate your next monthly subscription using last month's RA-paid activity, including low-volume and high-volume outliers.

What you'll need

1. **The Agent Monthly Report** (the HYPEMedical report prepared one month in advance) or each doctor's monthly RA total service code revenue. Third party and direct revenues are normally ignored due to low volumes.
2. The "**Subscription Estimate (with Outlier Protections)**" calculator.

The Subscription fee is based on last month's RA numbers (i.e., money already collected), which is why the report is available one month ahead.

Find the numbers you need in the monthly report

STEP ONE: In the Basic Information:

Enter the **Total Number of Doctors** (from last month's RA).

STEP TWO: Add Outliers (this is how the calculator stays fair)

After you enter a total number of doctors, a second box will pop up for you to enter outliers titled:

ADVANCED DOCTOR VOLUME BREAKDOWN

Count doctors by volume bands (low billers and high billers). You'll enter those counts into the Outlier section of the calculator. The outlier section is how we keep pricing fair when:

- some doctors bill very little (low-volume) and
- some doctors require heavier processing effort (very high-volume)

Low-volume outliers (paid amounts are low)

From your report, enter the count of doctors in each field:

- Very Low Volume (under \$2,500/month)
- Low Volume (\$2,500–\$6,000/month)
- Medium Volume (\$6,000–\$12,000/month)
- Normal Volume (\$12,000+ /month, no cap)

High-volume outliers (exceptionally high billers)

From your report, enter the count of doctors in each field:

- High Volume (\$75,000–\$150,000/month)
- Ultra-High Volume (\$150,000+/month)

These add-ons reflect real processing effort for extreme volumes while still avoiding a “percentage of earnings” model.

Enter Your Name and Email Address to see quote.

STEP THREE: Confirm the estimate

Once the numbers are entered correctly, review the following outputs:

- Base rate: \$ /doctor
- Regular + Low-volume doctors: \$
- High-volume add-ons: \$
- Actual average per doctor: \$
- Monthly total: \$ _____ ← this is your monthly subscription estimate

STEP FOUR: Quick accuracy check (recommended)

If you see a warning like:

*Your volume breakdowns (___doctors) don't match
your total (___ doctors). They should be equal.*

Then: Make sure that all outliers  counts add up to the **Total Number of Doctors** field.
